Welcome to Cesar's final project. This document was created to assist with understanding the point of the website. You will start at the login screen. **A user with credentials "test" "testpassword" was created.** After a successful login you will be redirected to the home page. The home page will show all clients in the database. The idea here is that if a client walks into the nonprofit that you are running asking for resources, you must check that he/she is in the system. If the client is in the system you can go ahead and give them their needs. Their needs are also shown in the table. If the client needs resources that you cannot offer you can view other agents by clicking the agents link. There you will see all the agents in the system. If you click on "view location" you can see a detailed map on how to get there. If you get a new client that walks in you can click on add form to add a new person to the system. The form will ask for their full name, date of birth, and needs whether they be food, shelter or medical needs.
